## What does casting mean?

Casting is a manufacturing process in which a liquid material is usually poured into a mold, which contains a hollow cavity of the desired shape, and then allowed to solidify. The solidified part is also known as a casting, which is ejected or broken out of the mold to complete the process.

## Is alloy steel same as cast iron?

Cast iron is actually an alloy of iron and carbon, just like steel, with the main difference

being that cast iron has more carbon in it. Whereas steel requires a carbon content of no more than 2 percent, cast iron usually contains 2 to 3.5 percent carbon.
